Re:	Remedial Investigation Report

The *Remedial Investigation Report* has been uploaded for review by the U.S. Environmental Protection Agency (USEPA).

Please note that revised appendices can be found in their respective subfolders with the following exceptions:

- Appendix Bi had no comments, so the June 2020 version remains unrevised in its subfolder for reference.
- Appendices H (BHHRA) and I (BERA) were previously approved and finalized, so those versions are available in their subfolders for reference.
- Appendix G (FMRM) is on a separate review cycle, and the latest version, dated May 2021, is available in its own deliverable folder.

This document has been revised based on comments received from the USEPA on December 8, 2020, consistent with the comment and response matrix provided by USEPA on March 26, 2021, and the multiple discussions and correspondences between NCG and USEPA that occurred between February 2021 and July 2021. The NCG considers this the final version of the report and believes it should be approvable by USEPA with no or minimal final revisions. As such, we have made several small edits to the text, tables, figures, and appendices in various places that were not specifically related to comments from USEPA on the previous draft. These minor revisions were made to improve accuracy, clarity, consistency, and readability, given the importance of the document to the project.

If USEPA has questions or comments or if there is any additional information that could be provided to facilitate an efficient and expedient review, please let us know.
